

# C6 EXHAUST LEDS

## HELPFULL TOOLS

WIRE COAT HANGAR    PLIERS.    JACK AND JACKSTANDS

This picture shows the location of the exhaust leds. Leds are attached to the rear of the rear facia brackets facing the front of the vehicle, Note the routing of the wires up towards the license plate lights. This is where the coat hangar comes in handy.

This shows the rear facia bracket that the leds will attach to on the back side between the screws you see inside the red box. Center the led bar between the brackets, peel and stick the led bar to the backside of the brackets.

Remove the 2 screws that hold one of the license plate lights on. Route the led wires as shown . Make sure the wires are clear of all exhaust pipes so they dont get burnt.

Use the 2 supplied scotch lock connectors to connect the led wires, black to black and brown to red. Test the lights to make sure your connections are good. Re-assemble the license plate light and enjoy the new lights!!
